PROFESSIONAL SUMMARY

MCA student at NIT Trichy who enjoys solving practical engineering problems. I learn new tools by building, with project work across backend systems, AI/LLM applications, and computer vision.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, C

AI & Computer Vision: LangGraph, LangChain, RAG, ChromaDB, YOLO11-Seg

Tools: Git, Docker, Postman, AWS

Backend: FastAPI, Node.js, Express.js, REST, Socket.io, AsyncIO

Data: PostgreSQL, MongoDB, SQLAlchemy, Alembic

Engineering: JWT, RBAC, automated testing, idempotency, circuit breakers

PROJECTS

ASIP — Autonomous Society Infrastructure Platform [Live Demo](#) | [GitHub](#) Apr – Jul 2026

- Designed a multi-agent workflow that takes a reported society issue from intake through diagnosis, impact assessment, contractor recommendation, and resident updates. Built with FastAPI, PostgreSQL, LangGraph, LangChain, and RAG across 7 agents and 4 incident categories.
- Implemented 15+ REST APIs, 15+ database entities, 4-role RBAC, and repair cost/duration estimates. Added idempotency, circuit breakers, Saga recovery, and correlation-ID tracing; exercised the system with 88 tests and Locust.

Placement Companion — Android Placement Prep App [GitHub](#)

- Built with a teammate in Kotlin and Jetpack Compose to help students plan preparation, track study, bookmark questions, and search company interview questions offline.
- Added Groq-powered study plans, doubt assistance, and interview feedback; the offline library covers 17,826 questions from 659 companies. Packaged as a 32 MB APK for Android 8+ (SDK 26+), targeting SDK 35.

Code Obfuscator [GitHub](#)

- Built a Flask web tool for transforming C++ source with selectable identifier renaming, junk-code insertion, opaque predicates, string obfuscation, and numeric-literal masking.

Sketch It — Real-Time Multiplayer Game [GitHub](#)

Apr 2025

- Created a browser-based drawing-and-guessing game: one player draws while others guess, with Socket.io synchronizing turns, chat, and scoring across the room.
- Added 60-second rounds, automatic drawer rotation, 10-point scoring, and 20 drawing prompts.

EXPERIENCE

AI/ML Intern • National Institute of Technology Tiruchirappalli

Jun – Jul 2026

- Built a Flask application around a transfer-learned YOLO11s-Seg model, trained on 284 custom polygon-annotated camel images to identify head, legs, hump, tail, and stomach.
- Now extending the project with additional anatomy and normalized body-ratio comparisons against selected reference camels; this comparison phase is in progress.

Backend Developer Intern • Vected Technologies Pvt. Ltd., Indore

May – Jun 2025

- Contributed backend features to a BigBasket-inspired grocery commerce platform, building 7+ REST endpoints and JWT authentication.
- Implemented CRUD workflows and validated API behavior with Postman in a team development workflow.

EDUCATION

Master of Computer Applications (M.C.A.) • NIT Trichy • GPA: 7.73/10

Expected 2027

Bachelor of Science in Computer Science • Sanskar College of Professional Studies, Indore • GPA:

2024

8.06/10

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

NIMCET: All India Rank 12 — NIT MCA Common Entrance Test

Problem Solving: 800+ DSA problems overall | Peak LeetCode Rating: 1806 (Top 8.06%) | CodeChef: 1403

LEADERSHIP

Volunteer, VERSION'25 Event • NIT Trichy

Mar 2025

- Coordinated VERSION'25 logistics for 130+ attendees from 30+ institutions across 11 events.
