PROFESSIONAL SUMMARY

Software engineering candidate focused on backend and AI/LLM systems, with hands-on experience designing REST APIs, database-driven applications, and real-time systems. Built a multi-agent infrastructure platform combining retrieval-augmented generation (RAG), predictive analytics, and reliability engineering across 15+ REST APIs and 15+ database entities. Solved 800+ Data Structures & Algorithms problems overall, reaching a LeetCode peak rating of 1806 (Top 8.06%).

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, C

Backend & APIs: FastAPI, Node.js, Express.js, REST APIs, Socket.io, AsyncIO

AI/LLM: LangGraph, LangChain, RAG, Multi-Agent Systems, ChromaDB, Vector Embeddings

Databases: PostgreSQL, MongoDB, SQLAlchemy, Alembic

Engineering: JWT, RBAC, CRUD, Automated Testing, Idempotency, Circuit Breaker, Error Handling

Tools: Git, GitHub, Docker, Postman, AWS

PROJECTS

ASIP — Autonomous Society Infrastructure Platform Apr – Jul 2026 [Live Demo](#) | [GitHub](#)

- Architected a 7-agent incident-management platform across 4 categories using FastAPI, PostgreSQL, LangGraph, LangChain, ChromaDB, and RAG to diagnose incidents, assess impact, select contractors, and communicate with residents.
- Built 15+ REST APIs across 15+ database entities, with 4-role RBAC, async SQLAlchemy, Alembic migrations, structured LLM outputs, and GPT-4 fallback.
- Implemented 6+ impact metrics and predictive workflows for repair cost and duration.
- Added idempotency, checkpointing, circuit breakers, Saga recovery, and correlation-ID tracing; validated with Docker, Locust, and 88 automated tests.

Placement Companion — Android Placement Prep App [GitHub](#)

- Collaborated with a teammate on a Kotlin/Jetpack Compose app using Room and DataStore for study planning, preparation tracking, bookmarks, and offline company-question search; the APK is about 32 MB and targets SDK 35 (Android 8+ / API 26+).
- The app includes Groq-powered study planning, doubt assistance, and interview feedback, plus an offline dataset with 17,826 question entries across 659 companies.

Code Obfuscator [GitHub](#)

- Built a Flask-backed C++ obfuscation tool with configurable identifier renaming, junk-code insertion, opaque predicates, string obfuscation, and numeric-literal masking.

Sketch It — Real-Time Multiplayer Game Apr 2025 [GitHub](#)

- Built a real-time multiplayer sketch-and-guess application using Node.js, Express.js, and Socket.io, implementing event-driven bidirectional communication for drawing, guessing, and chat.
- Added role-based gameplay, player management, automated drawer rotation, and real-time state synchronization across 60-second rounds, 10-point scoring, and 20 drawing prompts.

EXPERIENCE

Backend Developer Intern • Vected Technologies Pvt. Ltd., Indore May – Jun 2025

- Contributed to a BigBasket-inspired grocery commerce platform during a 2-month internship.
- Built 7+ REST API endpoints and implemented JWT-based authentication and CRUD operations within a structured, team-based development workflow.
- Validated API functionality through Postman-driven testing and worked with a teammate to deliver features on schedule.

EDUCATION

Master of Computer Applications (M.C.A.) • NIT Trichy • GPA: 7.73/10 Expected 2027

Bachelor of Science in Computer Science • Sanskar College of Professional Studies, Indore • GPA: 8.06/10 2024

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

NIMCET: All India Rank 12 — NIT MCA Common Entrance Test

Problem Solving: 800+ DSA problems overall | Peak LeetCode Rating: 1806 (Top 8.06%) | CodeChef: 1403

LEADERSHIP

Volunteer, VERSION'25 Event • NIT Trichy Mar 2025

- Coordinated logistics and registration for VERSION'25, the 33rd edition of NIT Trichy's All India MCA Meet, a 3-day festival of technical and non-technical events.
- Supported cross-institution communication, hospitality, and alumni engagement for 130+ participants from 30+ institutions, and organized 11 events spanning coding, UI/UX, and web design.
